A Shared Agenda for Exhibition and Conference

Investment, engineering, operations and academia converge in one interdisciplinary program.

360°

DATA CENTER ECOSYSTEM

Infrastructure, operations, investment and finance

The DCE conference program addressed investment and financing, energy, artificial intelligence, design, project delivery and operations together. Bringing technical infrastructure together with the perspectives of investors and operators created a broader framework for assessing the solutions showcased at the exhibition.

The published program covered connectivity and liquid cooling, critical power systems, project management and commissioning, and data protection. It also explored Türkiye's role in regional data center investment, sustainable growth and capacity suited to artificial intelligence.
